About ATLAST™

ATLAST is a technology developed to assist weapon systems managers with the task of evaluating, quantifying and reducing life cycle supportability costs without adversely impacting fleet readiness and availability. It is used to predict performance metrics within operations, maintenance and supply for a single asset or series/fleet of assets. This model application provides an integrated systems approach to modeling the dependencies between an asset's ability to achieve desired operating hours and the ability of the repair and supply capabilities to respond to the demands resulting from those operations.
