

Clockwork Group announces the public release of its flagship product, SPAR™ Version 4.1

Austin, TX - October 1, 2000

"This is the fastest, most feature-rich release of SPAR ever produced," enthused Professor Arie Dubi, Chief Scientist. As the breadth of industries that user SPAR widens, and as the models that Clockwork builds becomes larger, the scope and depth of SPAR technology must increase.

Chief Technologist, Dr. Anatoly Goldfeld, stated, "This version of SPAR will allow us to provide a more comprehensive level of large-scale studies for the defense, energy, chemical, and other industries.

Among the many new and enhanced features in SPAR 4.1 are significant increases in execution speed and the numbers of supported LRUs, systems, response functions, and other important objects and facilities.

Software Development Manager, Dr. Sergey Borodetsky, remarked, "We continue to improve the look and feel of SPAR while maintaining compatibility with prior releases." SPAR 4.1 is fully upward compatible with projects created under SPAR 4.0.

All customers with current maintenance contracts will receive SPAR 4.1 in the near future. Other SPAR customers may contact Clockwork Group for upgrades.
