

Clockwork Group announces the public release of SPAR Runner™

Austin, TX - November 5, 2000

Clockwork Group announces the public release of SPAR Runner™, a new SPAR batch processor which fully replaces Batch Runner, now obsolete.

"The SPAR user community requested an easier, more functional batch processor for generating numerous SPAR runs with no human intervention. We undertook to deliver something far beyond our customers' expectations," stated Clockwork CEO, Chaim Forst. "The next pleasant surprise is that we have decided to bundle SPAR Runner with recently released SPAR 4.1 at no additional cost to the customer."

SPAR Runner provides a very easy-to-learn interface for users to create numerous jobs for automatic inclusion in the batch run. The user defines virtually any number of input files, projects, and output files, and can then leave the computer to do its work without any intervention. "SPAR Runner even provides an easy-to-understand monitoring screen so that users can see the real-time progress and status of the batch run at any time," said Dr. Sergey Borodetsky, Software Development Manager.

SPAR Runner is bundled with the SPAR Suite as of Version 4.1.
