

Clockwork Solutions Announces the Release of SPAR™ v5.0

Austin, TX - September 30, 2002

Clockwork Solutions is excited to announce the release of **SPAR™ v5.0**, the newest implementation of Clockwork's predictive modeling technology! SPAR™ has always been at the cutting edge of predictive modeling for complex systems, and now with SPAR 5.0 our technology is even more powerful and usable than ever before.

SPAR 5.0 includes enhanced features such as:

- Increased model execution speed
- Easier and more organized input data process
- Parametric Batch Runner, which executes a batch of SPAR runs with different parameters sequentially and automatically.
- Advanced storages mechanism that gives SPAR the capability of modeling complex storage situations. Any kind of model element can now be stored in and removed from multilevel storages at any point in time.
- Increased space for user logic
- Allows use of the Automatic Spare Parts Optimizer (SPARopt v1.0)
